Helping Build the Lifestyle you deserve.™

Each and every elevator and lift that we install has layers of protection built into its design.

However, the safety devices within your system require routine service, testing and inspection in order to ensure that they will work when you need them.

With HomeLifts's Performance Basic Plan, your elevator or lift will be serviced within routine intervals compliant with state and national codes, as well as manufacturers' standards.

Our technical professionals are established experts in our field, utilizing some of the most advanced diagnostic tools and training in the industry. We pride ourselves on our ability to care for your equipment's safety devices the right way, every time.

When your safety is on the line, you can rely on HomeLift's professional staff to deliver quality service at an outstanding value. We have established our reputation for excellence with more than 20 years of hard, honest work and customer service.

Your service technician will go through a comprehensive point-by-point checklist, specific to your equipment. When the job is done, you can rest assured that your maintenance records are being kept up to date and backed up securely and electronically.

Additionally, if your technician does identify a safety or reliability concern, as a Performance Basic Plan holder, you will benefit from a 20 percent discount on any necessary work, as well as priority scheduling.

Statement of Coverage

YOUR PERFORMANCE BASIC PLAN WILL INCLUDE...

- ⊕ *Cleaning, inspection and minor adjustments of moving components including drive system, doors and gates, electro-mechanical interlocks, and suspension chains and ropes*
- ⊕ *Lubrication of drive and support bearings and rails*
- ⊕ *Inspection of clearances and obstructions*
- ⊕ *Inspection and tightening all support and structural fasteners*
- ⊕ *Periodic no-load testing and inspection of free-fall safety devices*
- ⊕ *Periodic inspection of overspeed safety governor*
- ⊕ *Basic adjustments to components including lock contacts, adjustable rollers, gear rack splines and motion control valves*
- ⊕ *Testing of voltage sources including all power supplies, battery power packs and line voltage supplies*
- ⊕ *Testing for all safety circuitry including directional safety switches, floor bypass switches and final/terminal limit switches*
- ⊕ *Consistent documentation of all code-required maintenance logs on-site and electronically*
- ⊕ *All testing performed at code-compliant and original equipment manufacturer-approved intervals*
- ⊕ *20 percent discount on any necessary work, as well as priority scheduling*

Regular maintenance has been shown to reduce the cost and frequency of repairs and to extend the life of your equipment.

The Performance Basic Plan does not include any repairs, warranties, trip and diagnostic fees, or government-required load tests.

The American Society of Mechanical Engineers felt it was so important to have these devices inspected routinely that regular inspections and testing are required by its National Elevator and Lift Safety Codes—and if your state has adopted these national codes, it may be more than just a good idea to have your elevator or lift maintained; it may be the law.
